Product Technical Specifications

Mod. SH-370

Mechanical protection gloves

Description

Nitrile coated nylon gloves. Breathable back. Thickened fabric in areas of highest wear. Superior sensitivity and sense of touch.

Use: Electronics, electrical assembly, Automotive wiring, Maintenance activities, Packing, Waste, Micromechanics.

With the implementation of the new EN 388:2016 standard, it is ensuring that there will be no changes in glove features and production procedures. For a certain period both standards (old and new) will coexist so that you may receive gloves with different marking (old and new) depending on whether the items are from our warehouse stock or new production.

Product characteristics

Protection level: EN 388:2016-4120B.

EN 420: Dexterity level 5.

Sizes: 8 and 9 (the rest of the sizes on request).

CATEGORY CAT-II

Results obtained in the EC type examination against mechanical risks as category II PPE by a Notified organization.

Mod. SH-370

Mechanical protection gloves

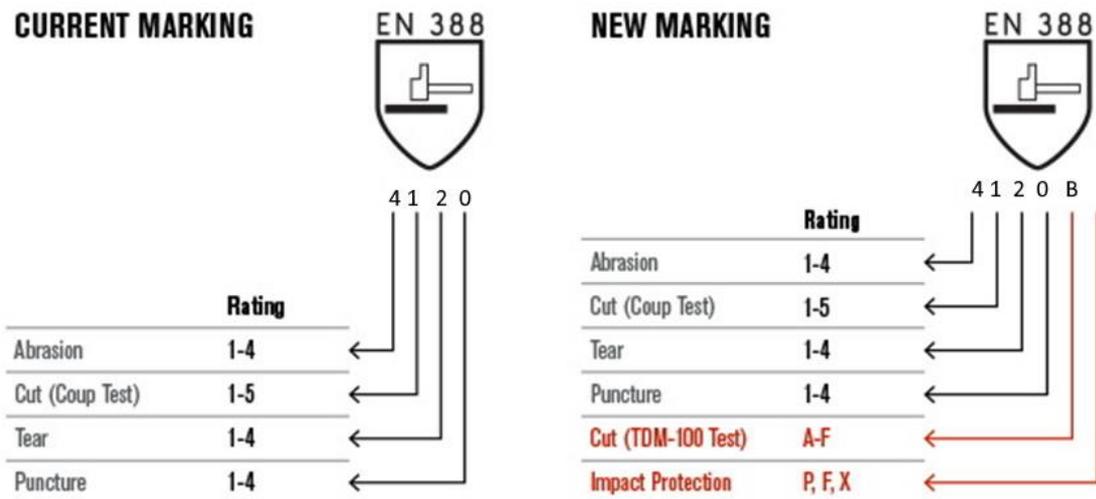

Instructions for use and maintenance

Avoid contact with corrosive liquids: They must not be washed or disinfected! Store the gloves properly and do not expose them to heat or fire. This PPE does not expire. Replace if there is any deterioration in the PPE. Do not use these gloves when there is a risk of entrapment by moving machine parts.

This glove is indicated, among others, for the following activities:

- Electronic industry.
- Electrical industry (assembly of appliances)
- Contact with food (fruit picking, selection)
- Automotive industry (wiring)
- Maintenance, packaging, and waste activities

LEVELS OF PROTECTION

Certificates

EN 388: 2016 Mechanical risks (applies to all classes of protective gloves about physical and mechanical aggressions by abrasion, bucking, perforation and tearing. This standard does not apply to anti-vibration gloves).

EN 420: Dexterity Level 5: Protective gloves. General requirements and test methods.

CE marked (Regulation (EU) 2016/425).
